

Mechanical Engineering student at Queen's University graduating April 2027 with a Certificate in Business and 16 months of engineering internship experience in production optimization, operational analysis, and field operations. Experienced using Python, SQL, Excel and BI tools to analyze performance, evaluate technical and economic opportunities, and translate complex data into actionable engineering recommendations.

Work Experience

Field Optimization Engineering Intern

Whitecap Resources Inc. • May 2025 - August 2026

- . Evaluated and prioritized 400+ well workovers representing \$16M+ in expenditures, incorporating production forecasts, operating costs, and payout economics to support technical and investment decisions.
- . Analyzed production performance across 800+ producing wells to identify underperformance, diagnose key drivers, and prioritize optimization and intervention opportunities.
- . Developed analytical workflows using Python, SQL, Excel, and Power BI to analyze large operational datasets, automate recurring analysis, and surface actionable performance insights.
- . Built a field motor sizing analysis tool to identify optimization opportunities, validating implemented motor swaps that reduced power consumption by an average of 25%.
- . Collaborated with field operations and technical stakeholders to investigate operating issues, develop potential solutions, and support execution of recommended interventions.

Summer Student

SaskEnergy Inc. • Summers 2023-2024

- . Performed field maintenance on equipment and sites in rural communities, ensuring safety and compliance.
- . Supported technicians in troubleshooting and daily operations, gaining hands-on exposure to utility systems.

Education

Queen's University- Smith Engineering

Bachelor of Applied Science, Mechanical & Materials Engineering, April 2027

Dean's Scholar, 2024-2025

Queen's University- Smith School of Business

Certificate in Business, April 2026

Skills & Abilities

- . Data & Analytics: Python, SQL, Excel (VBA, Power Query), Power BI, Tableau
- . Programming: MATLAB, C/C++
- . CAD: SolidWorks, Autodesk Fusion
- . Engineering & Analysis: Production analysis, economic modelling, technical reporting

Leadership & Projects

Co-Founder, Co-Chair

Undergraduate First-Aid Initiative at Queen's • August 2024 - May 2025, May 2026 - Present

- . Co-founded a student-led initiative providing subsidized First-Aid and CPR certification to Queen's students.
- . Led ratification, executive recruitment, fundraising and program launch planning.
- . Coordinated instructors, budgeting, marketing, and student outreach for campus certification clinics.

Interior Subteam Member

Queen's Relectric Design Team • September 2023 - April 2025

- . Designed, wired, programmed, and integrated a custom digital dashboard for the conversion of a gas-powered Jeep Wrangler into a fully electric vehicle, integrating mechanical, electrical, and software systems.
- . Collaborated with a cross-functional engineering team to troubleshoot integration challenges and support vehicle development.

Certifications & Training

- . First-Aid / CPR | H₂S Alive | WHIMIS | TDG
- . Courses in Reservoir & Completions Engineering Fundamentals – SAGA Wisdom
- . AI Pathways: Energizing Canada's Low-Carbon Workforce, Foundations & Technical Tracks - Amii
- . Class 5 Driver's License
